

Server security in the cloud is different

- Running VMs in the cloud requires an additional layer of security to protect the control plane surrounding your servers
- Threat detections need to extend to connected, cloud-native components including network, storage, and the control plane to fully assess and protect the security state of your servers
- To be effective, modern workload protection solutions need to provide traditional VM security and provide optimised detections and mechanisms for cloud-based resources

Features of Defender for Servers plans

Protecting Servers using Defender for Cloud

Defender for Servers Plan 1

- ✓ Integration with Microsoft Defender for Endpoint
- ✓ Microsoft Defender Vulnerability Management (Software inventory, VA)
- ✓ Automated onboarding and alert and data integration
- ✓ Foundational CSPM for Azure Arc-enabled onprem servers

Defender for Servers Plan 2

- ✓ All features of Defender for Servers Plan 1, plus:
- ✓ Agentless vulnerability scanning for Azure VMs and AWS EC2 instances
- ✓ Premium Microsoft Defender Vulnerability Management Capabilities
- ✓ Cloud-native detections
- ✓ Cloud-native controls (such as FIM, AAC, JIT VM Access,...)

Features of Defender for Servers plans

Annual M365 license AND Azure consumption based options

[Select a Defender for Servers plan in Microsoft Defender for Cloud | Microsoft Learn](#)

Defender for Servers Plan 2

All the features of Defender for Servers Plan 1 and;

- * [Network Layer Threat Detection](#)*
- * [Security Policy](#) and [Regulatory Compliance](#)
- * [Premium Vulnerability Management functions](#)
- * [Adaptive App Control](#)
- * [500MB no-cost select data ingest](#)
- * [Just-in-Time virtual machine access](#)**
- * [Adaptive network hardening](#) *
- * [File integrity monitoring](#)
- * [Docker host hardening](#)
- * [Network map](#)*
- * [Agentless vulnerability scanning](#)**

* Currently Azure Only

** Azure and AWS

Defender for Servers Plan 1

Defender for Endpoint P2

All the features of P1 and;

Defender for Endpoint P1

**endpoints only

- * [Next-generation protection](#)
- * [Attack surface reduction](#)
- * [Manual response Actions](#)
- * [Centralized management](#)
- * [Security reports](#)
- * [APIs](#)

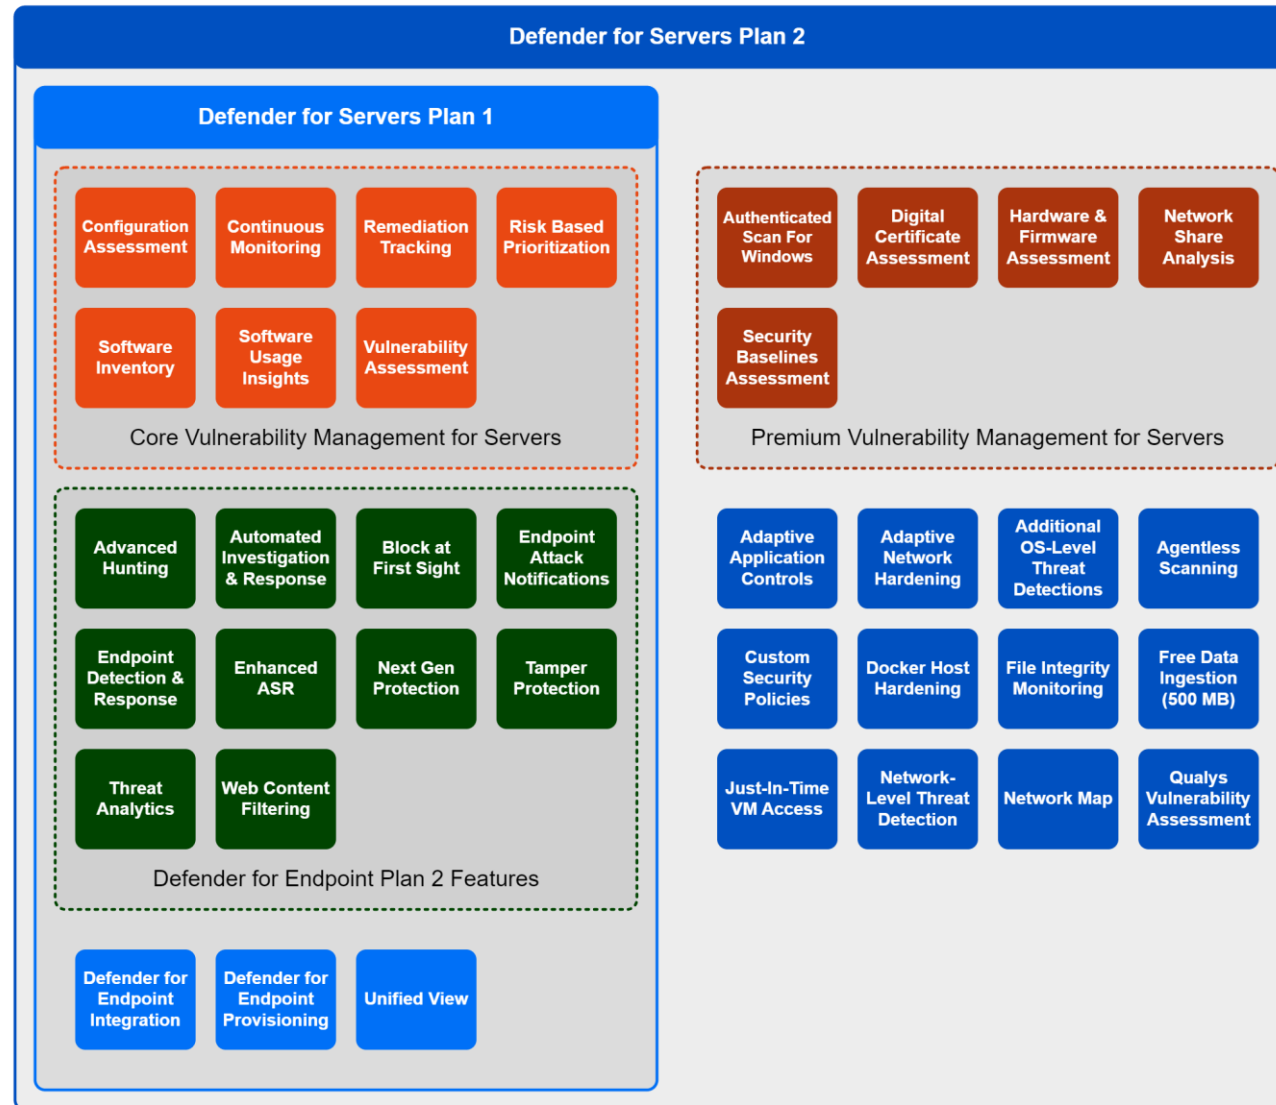

- * [Device discovery](#)
- * [Device inventory](#)
- * [Core Vuln Mgmt.](#)
- * [Threat Analytics](#)
- * [AIRs](#)
- * [Advanced Hunting](#)
- * [EDR](#)
- * [Endpoint Attack Notify](#)

Feature comparison

Feature	Defender for Endpoint for Servers	Defender for Servers P1	Defender for Servers P2
Hardening recommendations			
Asset discovery			
Vulnerability assessment using Microsoft Defender Vulnerability Management			
Attack surface reduction			
Next generation antivirus protection			
Endpoint detection & response			
Automated self-healing			
Hourly billing optimized for dynamic cloud resources			
Automatic agent onboarding for resources in Azure, AWS, GCP			
Management optimized for cloud environments			
Support for AWS and GCP-native compute (EC2 + Google Compute Engine)			
Unified experience for all workload types (Servers, containers, databases, and more)			
All Defender Vulnerability Management Premium capabilities: Security Baselines, Firmware & Hardware assessment, Digital Certificates, Network share analysis, Blocking Vulnerable Applications			
Log-analytics (500MB free)			
Regulatory compliance assessment			
Vulnerability assessments and security benchmarks			
Network layer threat detection *			
Adaptive application controls			
File integrity monitoring			
Just-in-time VM access for management ports			
Adaptive network hardening *			

* Currently Azure-only
